

## A Career in Journalism

A career in journalism is an exciting and dynamic path for those who are passionate about storytelling, current events, and uncovering the truth. Journalists play a crucial role in society, delivering news and information through various mediums, including print, digital, television, and radio.

In the UK, journalism offers a range of job prospects, from local news reporting to specialised roles in fields like politics, business, and investigative journalism. Entry-level positions, such as junior reporters, typically start with salaries ranging between £20,000 and £25,000 per year.

With experience and progression to roles such as senior journalist or editor, salaries can rise to £40,000 and beyond, especially in prominent media organisations.

To prepare for this career, A-levels in English, Media Studies, and History are often recommended, as they develop critical thinking, research, and communication skills.

Aspiring journalists may also consider studying Politics or Sociology to gain a broader understanding of societal issues.

While the industry can be competitive, the growing demand for digital content and multimedia skills ensures journalism remains a rewarding and impactful career choice.
